| • Kotlin | • C |
| • Java | • C++ |
| • Spring Boot | |

Projects

Participium

Typescript Team member in a team of 6

Participium is a website owned by the government where citizens can report problems around the city by pinning them directly in an interactable map for the government to be made aware of them and try to fix them.

File management system

Kotlin SpringBoot Team member in a team of 4

Where we developed a scalable document management platform using a Spring Boot and Kotlin microservices architecture. We implemented a TUS-compliant resumable upload system leveraging PostgreSQL for metadata and MinIO for object storage. To enhance document discoverability, we architected an event-driven pipeline via Apache Kafka, utilizing Spring AI to perform asynchronous summarization and classification. The ecosystem was secured through Keycloak (OAuth2/OIDC) and a Spring Cloud Gateway, enforcing both RBAC and ACLs for fine-grained resource protection.

Cooking app

Kotlin(Android Studio) application built in a team of 4.

The application implements role-based access control, offering guest exploration alongside a full-featured authenticated tier. Key capabilities include full recipe lifecycle management (creation, modification, and duplication), interactive reviews, and a real-time notification engine that keeps users engaged through social follows, recipe favoriting, and version-forking alerts.

Guess a sentence

Javascript + Node.js Solo Project

A type of hangman game where we have to guess a sentence by clicking on the letters and then inputting the sentence using keyboard. You start with 100 coins. Each choice removes coins 2x for wrong letters, 1x for correct ones, and each coin is given a random value. On completion you go into another round and gain 100 coins. If you run out of coins you cannot make choices anymore and your only choice is to guess the sentence using keyboard.

Portfolio

Simple portfolio website created to display my current project and skills

C, C++ and Java

I have not partaken in any actual project but I do have experience solving exercises and exams that the professors had prepared for us.
