Address

Italy, Turin, Via Frinco 16,
10136

Education

Bachelor of Computer
Engineering

Polytechnic University of Turin

Masters in Software
Engineering

Polytechnic University of Turin

Expertise

Javascript

Typescript

Kotlin

C

Java

C++

Language

English

Spanish

Projects

Participium(Typescript)

Team member in a team of 6

Participium is a website owned by the government where citizens can report problems around the city by pinning them directly in an interactable map for the so that the government can be made aware of them and try to fix them.

File management system(Kotlin SpringBoot)

Team member in a team of 4

Where we developed a scalable document management platform using a Spring Boot and Kotlin microservices architecture. We implemented a TUS-compliant resumable upload system leveraging PostgreSQL for metadata and MinIO for object storage. To enhance document discoverability, we architected an event-driven pipeline via Apache Kafka, utilizing Spring AI to perform asynchronous summarization and classification. The ecosystem was secured through Keycloak (OAuth2/OIDC) and a Spring Cloud Gateway, enforcing both RBAC and ACLs for fine-grained resource protection

Cooking app(Android studio Kotlin)

Team member in a team of 4(ongoing)

It is currently in progress and it will be done by the end of June(at the latest) Its an app where users have to authenticate to use the full utilities or can access as a unregistered user for the basic ones. You can search for recipes, duplicate and edit them should you wish as well as rate and give reviews. Get notifications if any of these happen for your recipe. You can post recipes. Also filter search and recommendations based on preferences and/or allergies

Guess a sentence(Javascript + Node.js)

Solo Project

A type of hangman game where we have to guess a sentence by clicking on the letters and then inputting the sentence using keyboard. You start with 100 coins. Each choice removes coins 2x for wrong letters 1x for correct ones and each coin is given a random value. On completion you go into another round and gain 100 coins. If you run out of coins you cannot make choices anymore and your only choice is to guess the sentence using keyboard

C,C++ and Java

As for the C,C++ and Java I have not partaken in any actual project but I do have experience solving exercises and exams that the professors had prepared for us.
